SUPPLEMENTARY DATA

Supplementary Table 1. The 3D T1-SPACE Findings for 166 Suspicious Arteries with Final Diagnosis.

3D T1-SPACE Findings	No. of Arteries (n=166)
Specific Findings	61 (36.7%)
IMH	47 (28.3%)
Intimal Flap	11 (6.6%)
Patent Double Lumen	3 (1.8%)
Non-specific Findings	105 (63.3%)

Note: Applicable data are numbers of arteries with percentages in parentheses. The imaging features without any of the specific findings, including intramural hematoma (IMH), intimal flap, and double lumen are non-specific findings.

Supplementary Table 2. The DSA Findings for 95 Arteries with Successful 3D T1-SPACE and DSA.

DSA Findings	No. of Arteries (n=95)
Pearl and String Sign	9 (10%)
String Sign	2 (2%)
Intimal Flap	1 (1%)
Intimal Flap and Dilation	1 (1%)
Dilation	21 (22%)
Irregular Stenosis	35 (37%)
Tapered Occlusion	7 (7%)
Non-tapered Occlusion	15 (16%)
Normal	4 (4%)
Intraluminal Thrombus (+)	39 (41%)

Note: Applicable data are numbers of arteries with percentages in parentheses.
